

NOTICE

Please note that the writer has an open mind on the interpretation of the 1947 historical event now known as the Roswell Incident. There is neither proof nor disproof as of 29-Jul-2008 to support that the Roswell Incident was a crash of an extraterrestrial space craft. The writer does certify taking each photograph beginning with the labels DSC or dsc. The origin of the photograph labeled as "Roswell_NM_1947" is unknown. Importantly, the authenticity of this photograph and the authenticity of the photographed documents can not be established by the writer.

Since visiting the Corona crash site on 22-Dec-2006 (shown in photographs DSC08260, DSC08262, and DSC08265), this site has been subsequently closed to the public. The writer finds this intriguing because this site has received very little traffic as shown in photograph DSC08260. This suggests that the closure is due to something other than excessive visitation by the public. Furthermore, sites previously classified as "Top Secret" including the Trinity Test Site (site of the world's first atomic bomb detonation) are now open to the public on selected days each year.
