The blood supply of the military has been found to be severely TAINTEd with Human Immuno-Virus (HIV) - the virus which causes AIDS -- as well as tainted with Hepatitis "B" and "C." The discovery was made when Ukraine asked NATO for 62,000 liters of emergency blood supply. NATO provided the tainted blood!

The Ukraine medical authorities tested the TWO BATCHES of blood supplied by NATO and found the following:

BATCH ONE

6.3% with HIV,

7.4% with #hepatitis B, and;

3.2% with hepatitis C.

BATCH TWO

5.9% with HIV,

6.8% hepatitis B, and;

3.1% hepatitis C

It is not yet known from which NATO countries the tainted blood came, or if it came from several (or all) countries.

It is also not known why military blood supplies were not tested for these diseases when Donors gave the blood.

It is widely known that any person who received blood tainted with any of these viruses, contracts the virus themselves.

HIV causes AIDS and even though the condition can be treated with vast and dangerous anti-viral drugs, person infected are never "cured."

Those serving in the Military or those of you with family members or friends in the military, may want to alert them to reconsider their continued service given the reality that emergency blood supplies for the military are now known to be tainted with the virus that causes AIDS and other viruses which cause Hepatitis.
