Edward Jones
c/o Dr. David K. Christen
Solid State Division
Oak Ridge National Laboratory
Oak Ridge, TN 37831

Dear Mr. Jones,

As you are no doubt aware, LT-20 will be held in Eugene, Oregon from August 4-11, 1993. Associated with the main conference will be a number of satellite conferences on specific topics to be held at the same site both before and after LT-20. John Clem, Doug Finnemore and I are in the process of arranging such a satellite conference. The title of our conference will be **Workshop on the Statics and Dynamics of Vortices in Superconductors**. The dates for the workshop will be August 1-3, 1993.

We are writing to invite you to speak at the workshop. We are planning a program which will have an Invited Late News Session. We would like you to speak at this session. It is our present plan for these talks to be 10 minutes in length with 5 minutes for questions and for these to cover late breaking developments. We hope that you will be able to accept our invitation.

It is clear that with the advent of the high T_c materials, the interest in this field has exploded with people working in it from a wide variety of backgrounds. It is our hope that this workshop will provide an opportunity for the very different points of view in this area to be discussed in an intimate workshop setting. We are trying to invite people to this workshop who might not normally attend the same conferences so that we can have an animated discussion of the various contentious issues.

We have tried to put together a program that will be both interesting and stimulating. We very much hope that you will be able to attend and participate in the workshop. If you are able to accept our invitation, please contact David Bishop either by phone ((908) 582-3927), FAX ((908) 582-3260), e-mail at maria@physics.att.com, or mail at the above address. We request a response by **March 15, 1993** with a title for your presentation. We are looking forward to your reply.

Sincerely,

David J. Bishop

Subject: Interested in your superconducting antenna research

Dr. Jones,

I understand you are no longer in the physics field but have become a surgeon. Wow!

I am interested in reproducing the wire antenna experiment you made in 1997 and wrote about

in your paper called "High Temperature Superconducting antennas". NASA may be able to use

this concept for our new initiative to explore the solar system and beyond. The outer

planets are very cold therefore HTSC materials seem to make sense. I would like to talk

to you about your experiment in order that we may duplicate it here at GSFC/Wallops.

Please feel free to either call or e mail.

Thanks, Freeman Blackwell

Ed Jones

Dear Ed

I have gone over the paper you sent me and made several comments and suggestions. You can do with them whatever you like but I think the comments I have added will make it read a little better. As for authorship, I will leave it up to you. I think it is a fine paper which raises an important question. I obviously believe it as the discussions we had when you were out here triggered this notion. I would be happy to be a co author on it but I will leave it up to you. There may be political reasons you may not want my name on it and if so that is alright too.

One request if you decide to put my name on it. ~~If~~ Could you add "RCD acknowledges research support from AFOSR, grant # F4962-092-0002" in any event, could you send me a final version?
+ thanks
Bob.

Dear Dr Jones

**RE: INTERNATIONAL JOURNAL OF MODERN PHYSICS B
(IJMPB)/MODERN PHYSICS LETTERS B (MPLB)**

We have been informed by one of our advisors that you have done some very interesting and important work which was published in Physical Review Letters.

Therefore I would like to invite you to write either a brief review or long review of your research on **Anomalous T^3 Inverse Hall Mobilities Observed in $Sr_{1-x}CuO_2$ and $Sr_{0.9}Nd_{0.1}CuO_2$ Infinite-Layer Thin Films** that you have published in PRL. We hope very much that you could include more background materials to this review, and perhaps also some results from other works. It would also be better if you could suggest a less specific title for your review article.

For the past seven years, we have published some very good reviews and research papers by K A Mueller, R Schrieffer, F Wilczek, E Witten, E Fradkin, A I Larkin, L Esaki, D C Tsui et al. in both the Int. J. Mod. Phys. B (IJMPB) and Mod. Phys. Lett. B (MPLB). All reviews are by invitation only.

World Scientific has established a strong reputation as one of the largest international scientific publishers, in physics, in terms of the number of books and proceedings published annually. WS also has a unique **dual pricing** policy for books, proceedings and journals. For important books and especially conference proceedings, we put out both hard and soft cover editions. These are printed concurrently. For journals, we have a different price structure for the libraries in the Third World Countries and most of the Eastern Bloc Countries, as well as individual scientists worldwide. We believe that no other scientific publisher has this pricing policy. Because of our pricing policy, these 2 journals are able to be channelled to all parts of the world, unlike most of the existing journals in Condensed Matter Physics, as they are too expensive, especially for developing and East European countries.

Dr. E.C. Jones
Solid State Division
Oak Ridge National Laboratory
Oak Ridge, TN 37831

Dear Dr. Jones,

Thank you for the preprint you sent on J_c vs O-content in 123. Now that I am on Quarter Break, I have had a chance to read it, and find it very interesting. There are a couple of points that I can comment on.

(1) The dos peak associated with the chains is not related to the van Hove singularity (vHs) I have been talking about. There is, however a CuO_2 -plane related saddle point (i.e., vHs) within 20 meV of the Fermi level, according to Andersen, et al. [Physica C185-9, 147 (1991)], which plays an important role in enhancing electron-phonon coupling.

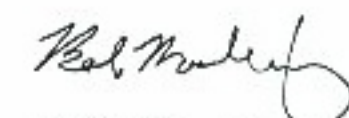

(2) The fact that the vHs is not exactly at the Fermi level in stoichiometric YBCO may explain why the optimum T_c falls at $\delta \neq 0$. However, the fact that the maximum T_c falls in the two-phase region (reduced j_c) strongly suggests that this phase separation is *not* the nanoscale disorder that I had predicted. Instead, it is probably related to chain layer disorder giving rise to inhomogeneous doping. Nevertheless, I would be most interested in any other information you might have about the T_c peak vs inhomogeneity. For instance, do you know where the T_c peak falls with respect to the thermopower crossover? Is there a preprint of your Ref. 46? (Are there more goodies in your thesis?)

(To tie up points 1 and 2, I think that 'chain mischief' plays an important role in YBCO. I believe that similar nesting processes are occurring in both the chain and plane layers: i.e., there is a *competition* between structural disorder and superconductivity. Since the chains are nearly one dimensional, the nesting instability is probably too large, so the structural effects win out over superconductivity.)

(3) Finally, it looks like you should be interested in anisotropic effective medium theories in order to calculate the correct average resistivity and Hall effect in your inhomogeneous samples. I just happen to have written such a paper: PRB37, 9336 (1988) (See also Xia & Stroud, PRB37, 118 (1988)).

Please keep me informed about your future work along these lines.

Sincerely,

R.S. Markiewicz

Dear Sir,

I would greatly appreciate receiving (pre) reprint of your article entitled.....

.....Anomalous T^3 Inverse Hall mobilities in V_xCo_2
in thin layer.....
which appeared in submitted to PRL..... and any other

papers of similar nature.

I would consider it a favour to be placed on your mailing list for other papers.

Yours sincerely

Dr. Edwin C. Jones

WASHINGTON

October 21, 2004

Mr. Edwin C. Jones, M.D.
117 Kendall Park Drive
Nashville, Tennessee 37217-3567

Dear Mr. Jones:

Thank you for your letter about medical research funding.

The President believes that we must find better therapies and cures for diseases that affect Americans. He has demonstrated a strong commitment to medical research by completing a 5-year doubling of the National Institutes of Health (NIH) budget, and his 2005 budget proposal includes more than \$28 billion for the NIH. As a result of this increase, the NIH will be able to support a record total of nearly 40,000 research project grants and the work of more than 200,000 research personnel at approximately 2,800 universities, hospitals, and other research facilities. Research funded through the NIH has led to many medical breakthroughs, including lifesaving vaccines, new cancer therapies, human genome sequencing, and effective drugs for the treatment of mental illness.

On December 3, 2003, the President signed into law the 21st Century Nanotechnology Research and Development Act. His 2005 budget proposal includes \$982 million to support this initiative. Through this science, we may one day be able to detect cancer and other diseases on the cellular level and target treatment to affected tissues, potentially alleviating many unpleasant and sometimes harmful side effects. The President has also called for a permanent extension of the Research and Experimentation tax credit to encourage companies to continue leading-edge medical research and product development that will help save lives.

The Administration will work to ensure that Federal resources are used effectively to find better treatments and cures for medical conditions such as cancer, AIDS, heart disease, diabetes, Alzheimer's disease, and others. Thank you again for writing about this important issue.

Sincerely,

A handwritten signature in black ink, reading "Heidi Marquez". The signature is fluid and cursive, with the first name "Heidi" and last name "Marquez" clearly distinguishable.

Heidi Marquez

Dear Dr. Jones:

On behalf of President Bush, thank you for your correspondence about the President's Fiscal Year 2009 Budget. We appreciate hearing your views and welcome your suggestions.

President Bush is committed to encouraging economic progress, keeping America safe, and upholding our deepest values of faith and family. The President's Budget demonstrates his dedication to funding our Nation's key priorities without raising taxes.

To learn more about the President's Budget, you may wish to visit the White House website at whitehouse.gov/infocus/budget.

Thank you again for writing. Best wishes.

Sincerely,

A handwritten signature in black ink that reads "Nancy Theis". The signature is written in a cursive, flowing style.

Subject: WW-II Soldier Grave Marker

Dear Ms. Jenny Rose Folsom and Honorable Vice President Cheney:

Ms. Folsom thank you for your interest in our American Veterans. I'll reattach the original request below the separator that I sent to our Honorable Mr. VP Cheney as he is a veteran himself.

As you requested, my mailing address is as follows:

Edwin C. Jones, MD, PhD
9031 Cross Park Drive
Knoxville, TN 37923
(865) 545-4592

Thank you especially Ms. Folsom and also Mr. Vice President,
We must care for veterans including those who died years ago.
God Bless you both for your efforts.

Dr Edwin C. Jones, MD, PhD

Can I make a Memorial Day 2008 request? I have a half uncle who I never met but I learned about during my genealogy search of my family. He died and is buried just north of Cincinnati, OH. My research showed he served during the entire length of World War II. Unfortunately, he has NO GRAVE MARKER and I find this unacceptable. If you can assist me at getting a brass WW-II marker on his behalf, I'll provide the concrete base at my expense.

God Bless you Mr. President and Mr. Vice President.

Edwin Jones, MD

P.S. This is the information that your staff will need: (cut)

(White House response follows)

OFFICE OF THE VICE PRESIDENT
WASHINGTON

June 6, 2008

Dear Dr. Jones:

Thank you for contacting Vice President Cheney for assistance in dealing with an agency of the Federal government. The Vice President has asked me to respond.

We are forwarding your matter to the Department of Veterans Affairs. That agency will review the facts and either start a case, reopen your old case, or explain their previous decision on your former case, as applicable. We have requested that they respond directly to you with a copy to us for our files, and we expect this to be done at the earliest possible opportunity.

Thank you for contacting the Vice President.

Sincerely,

Jenny Rose Folsom
